

How systems approaches are informing and assisting industry and government decision-making

Jacqueline McGlade
European Environment Agency

Evolution of environmental issues and challenges

In the spotlight in	Climate Change	Natural Resources and Waste	Nature and Biodiversity	Environment and Health
1970s/1980s (until today)	Reduce greenhouse gas emissions from power and heating plants ; reduce emissions from landfills .	Reduce hazardous substances in waste; Reduce impact from waste disposal ; reduce impacts from landfills and spills	Protect individual species (eg birds) and habitats (eg NATURA 2000).	Reduce emissions of specific pollutants into air, water, soil; improve wastewater treatment
1980s/1990s (until today)	Reduce greenhouse gas emissions from transport and agriculture ; increase share of renewable energy .	Reduce and recycle waste ; reduce waste generation through prevention approach.	Establish ecological networks ; manage invasive species ; reduce pressure from agriculture, forestry, fisheries and transport	Reduce emissions of pollutants from common sources (e.g. transport related noise and air pollution) into air, water, soil; improve regulation of chemical substances .
1990s/2000s (until today)	Establish economy wide approaches, provide behavioural incentives and balance drivers of consumption ; share global burdens on mitigation and adaptation .	Achieve sustainable resource use (eg material flow, food, energy, water) and consumption in the face of increasing demand and competition.	Focus on ecosystem services linked to climate change, resource use and health; account for use of natural capital in decision in sectoral management; reduce the global footprint .	Reduce people's combined exposure to harmful pollutants and other stressors link better human health and ecosystem health .

Increasing degree of complexity

European policy for energy efficiency

- ‘The world’s energy system is at a crossroads. Current global trends are patently unsustainable – environmentally, economically, socially.’
- IEA, World Energy Outlook 2008

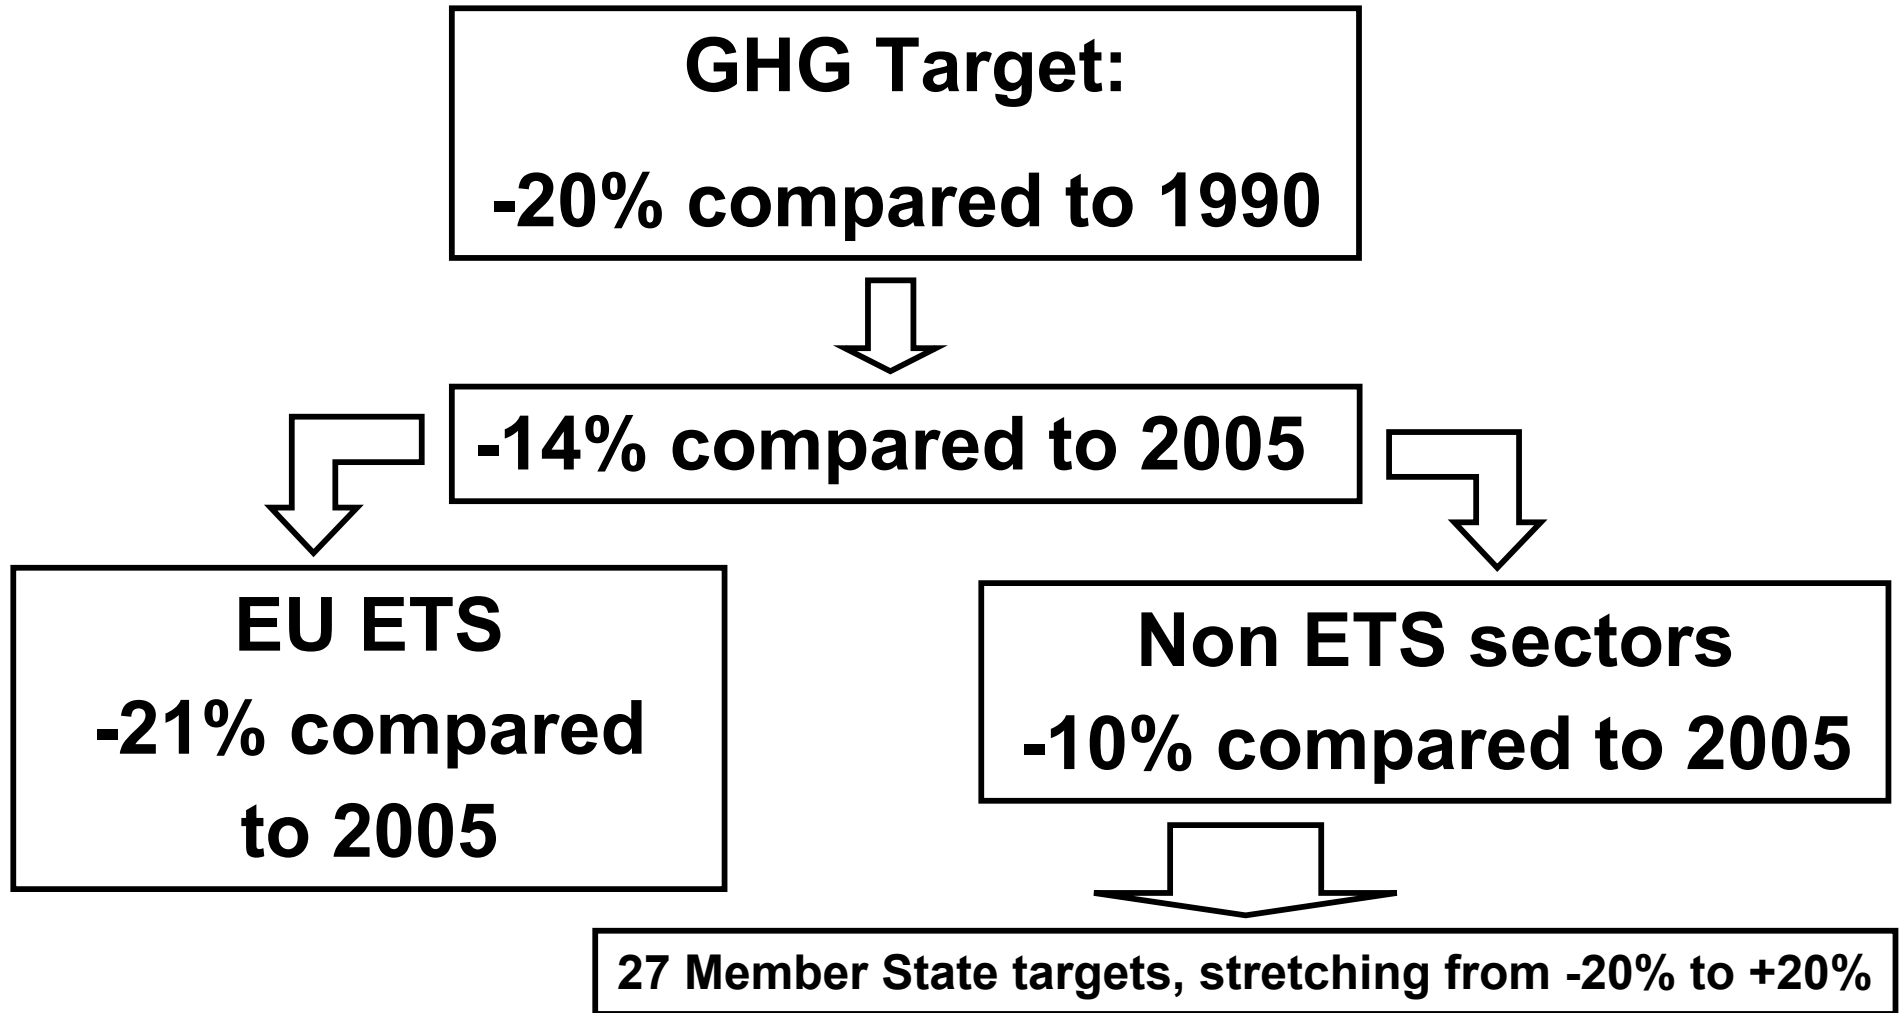

The 2020 targets in the Climate Action and Renewable Energy (CARE) package'

Energy for a Changing World

- 20% GHG reduction compared to 1990
 - Independent commitment
- 20% renewables share of final energy consumption
- 10% biofuels in transport, with
 - production being sustainable
 - second generation biofuels commercially available
- 20% energy efficiency target: non-binding

How will the emission targets be met?

GHG Target:

-20% compared to 1990

- Going for 30%?
- What features of an international agreement will trigger -30%

-14% compared to 2005

EU ETS

-21% compared to 2005

Non ETS sectors

-10% compared to 2005

27 Member State targets, stretching from -20% to +20%

- Auctioning and international competition?
- New sectoral approaches?
- Linking trading Schemes
- New CDM?

- New effort sharing among MS?
- Use of LULUCF?
- Include international shipping?
- New Mechanisms

Cost of emissions reductions

IEA, Energy and Technology Perspectives 2008

Cost of emissions reductions

McKinsey Global Institute, 2008

THE COST CURVE PROVIDES A “MAP” OF ABATEMENT OPPORTUNITIES

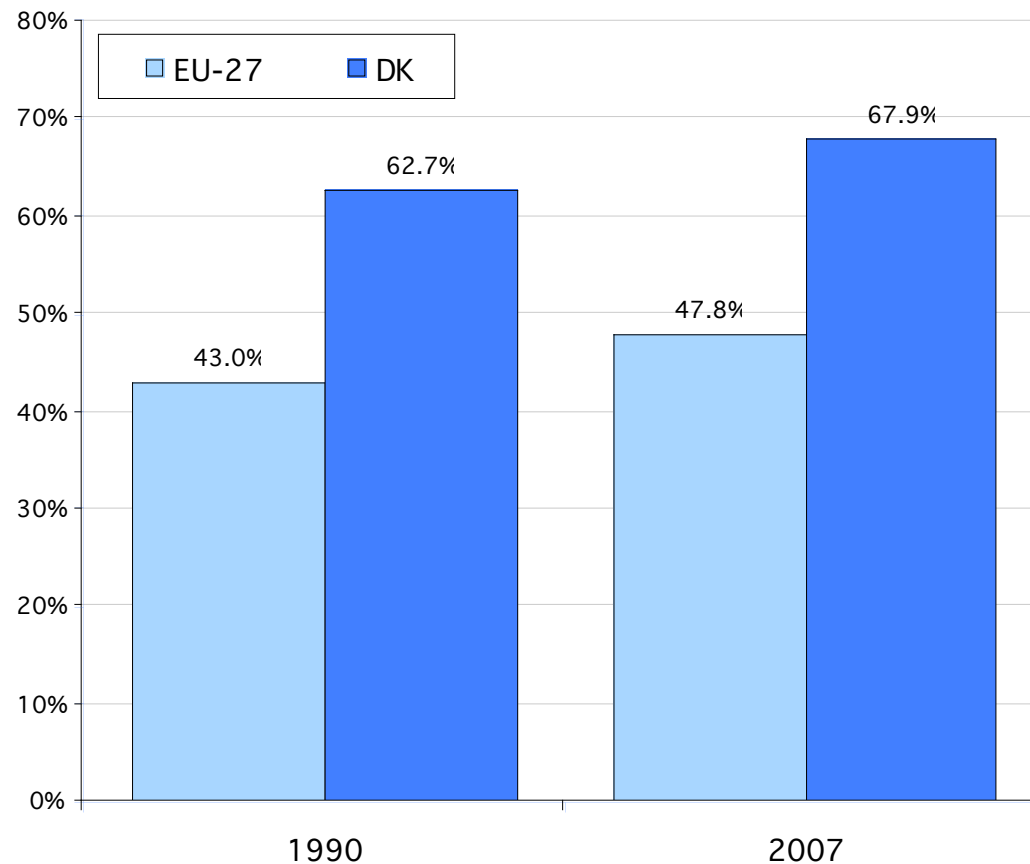

Cost of abatement, 2030, €/tCO₂e*

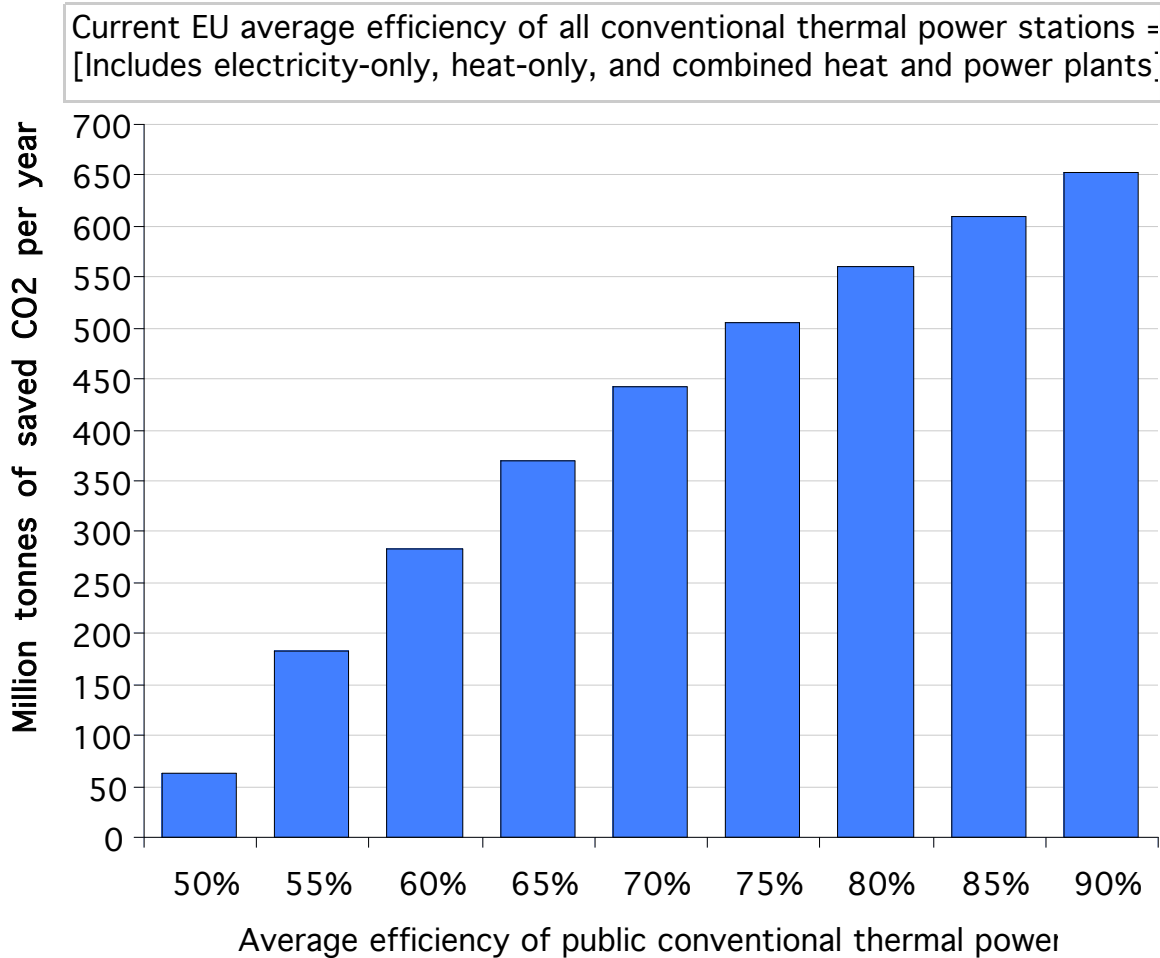

* Tons of carbon equivalents.

Source: McKinsey and Vattenfall analysis

Average transformation efficiency from public conventional thermal power stations and district heating plants

Projected EU-27 annual CO2 emission savings assuming improved transformation efficiencies

Final consumption by sector and energy losses (% of primary energy consumption)

ODEX energy efficiency index, EU-27

Small efficiencies for households translate into huge savings for society

Improved efficiency is offset by changing behaviour

EU is already halfway to its 2020 renewables target

Decentralisation of power and new grid infrastructure

The capital stocks that determine the production of goods and services

- Manufactured capital
- Financial capital
- Social capital
- Human capital
- **Natural capital**

SOER 2010

SOER 2010 Day - 13 April 2010

Structure of SOER 2010

Synthesis

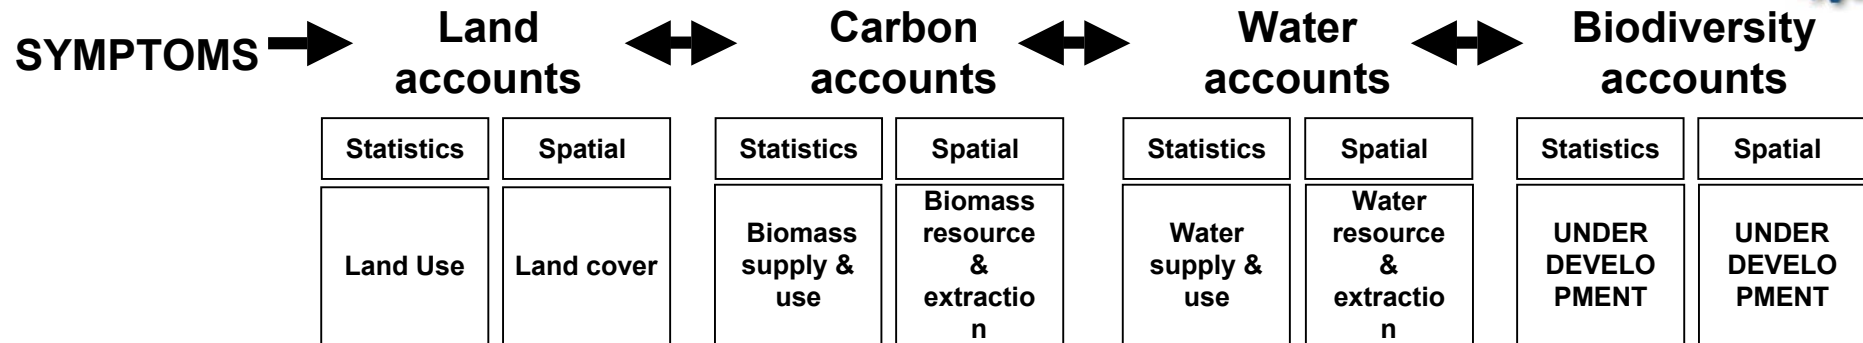

Emerging key messages

- Thematic review reveals (in-)direct links between environmental issues.
- Many policies rely for success on how and where we use natural resources (natural capital).
- Global context reinforces interconnectness between issues (systemic risks).
- Mitigating systemic risks needs common stewardship of natural capital.
- Interconnectness risks –
interconnected actions –
interconnected governance

FRAMEWORK TO MEASURE WHAT MATTERS...

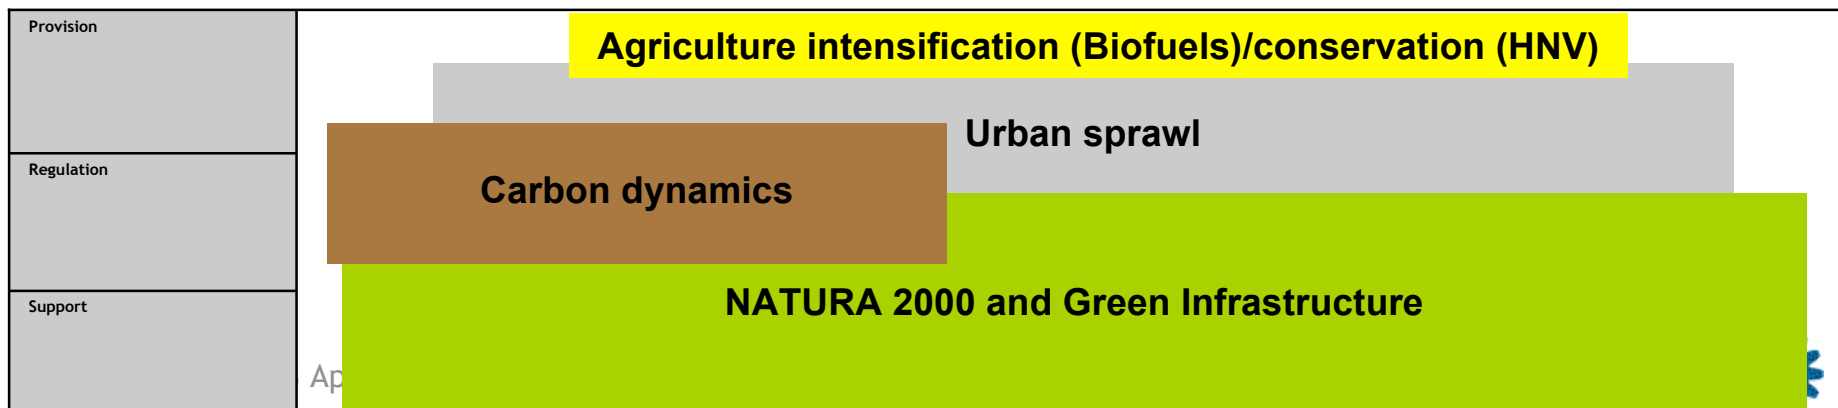

DIAGNOSE:

Farming, food, fiber				
Tourism, recreation				
Resources provision				
Conservation/maintain				
Forestry and wood				
Water provision/manage				
Infrastructure, urban				
Energy, mining, waste				

NOWCASTING:

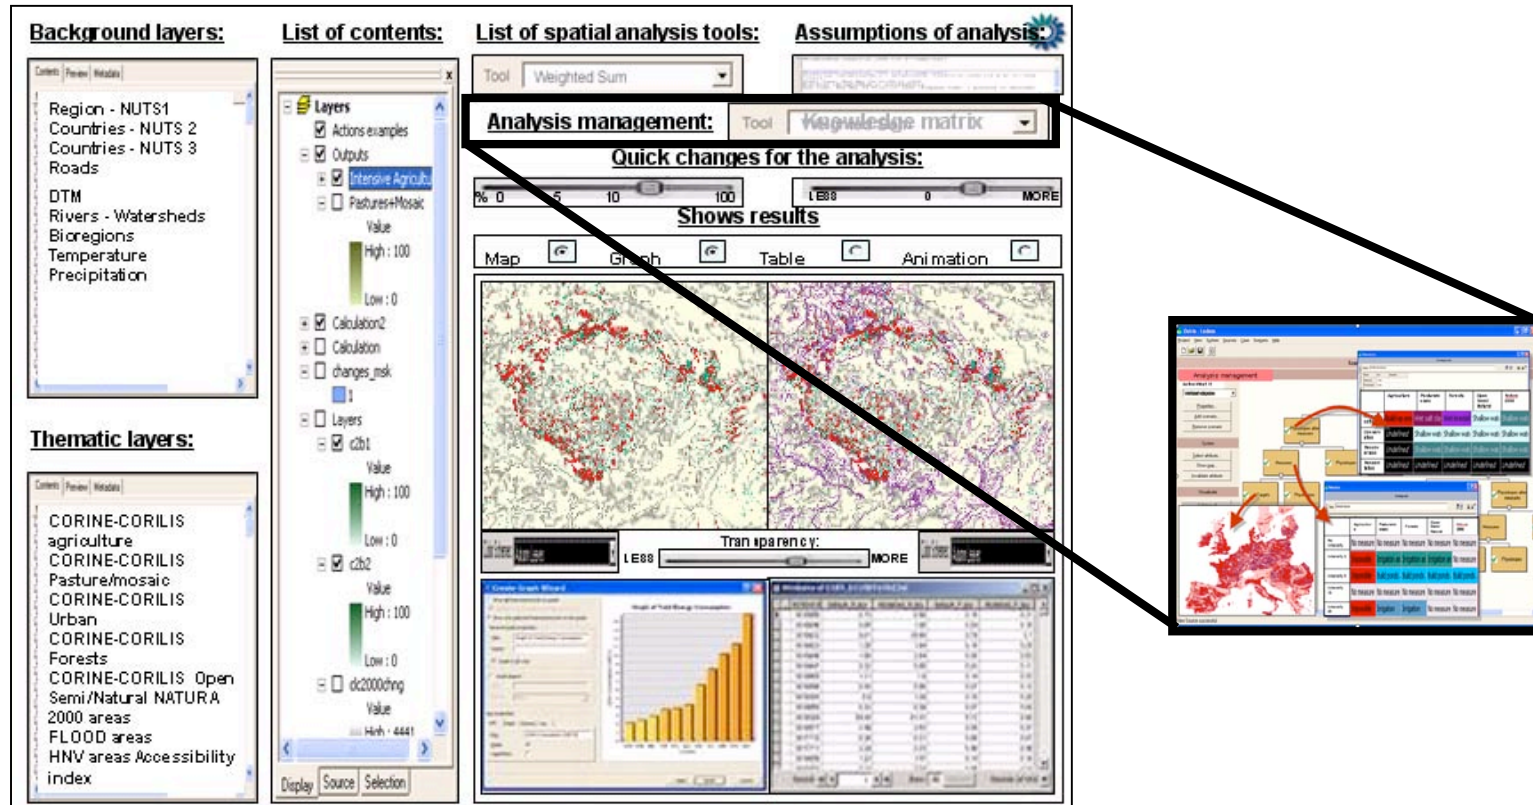

INTERFACE DEVELOPMENT AND APPLICATION...

Prototype design and development:

Nowcasting definition and visualization; Knowledge management

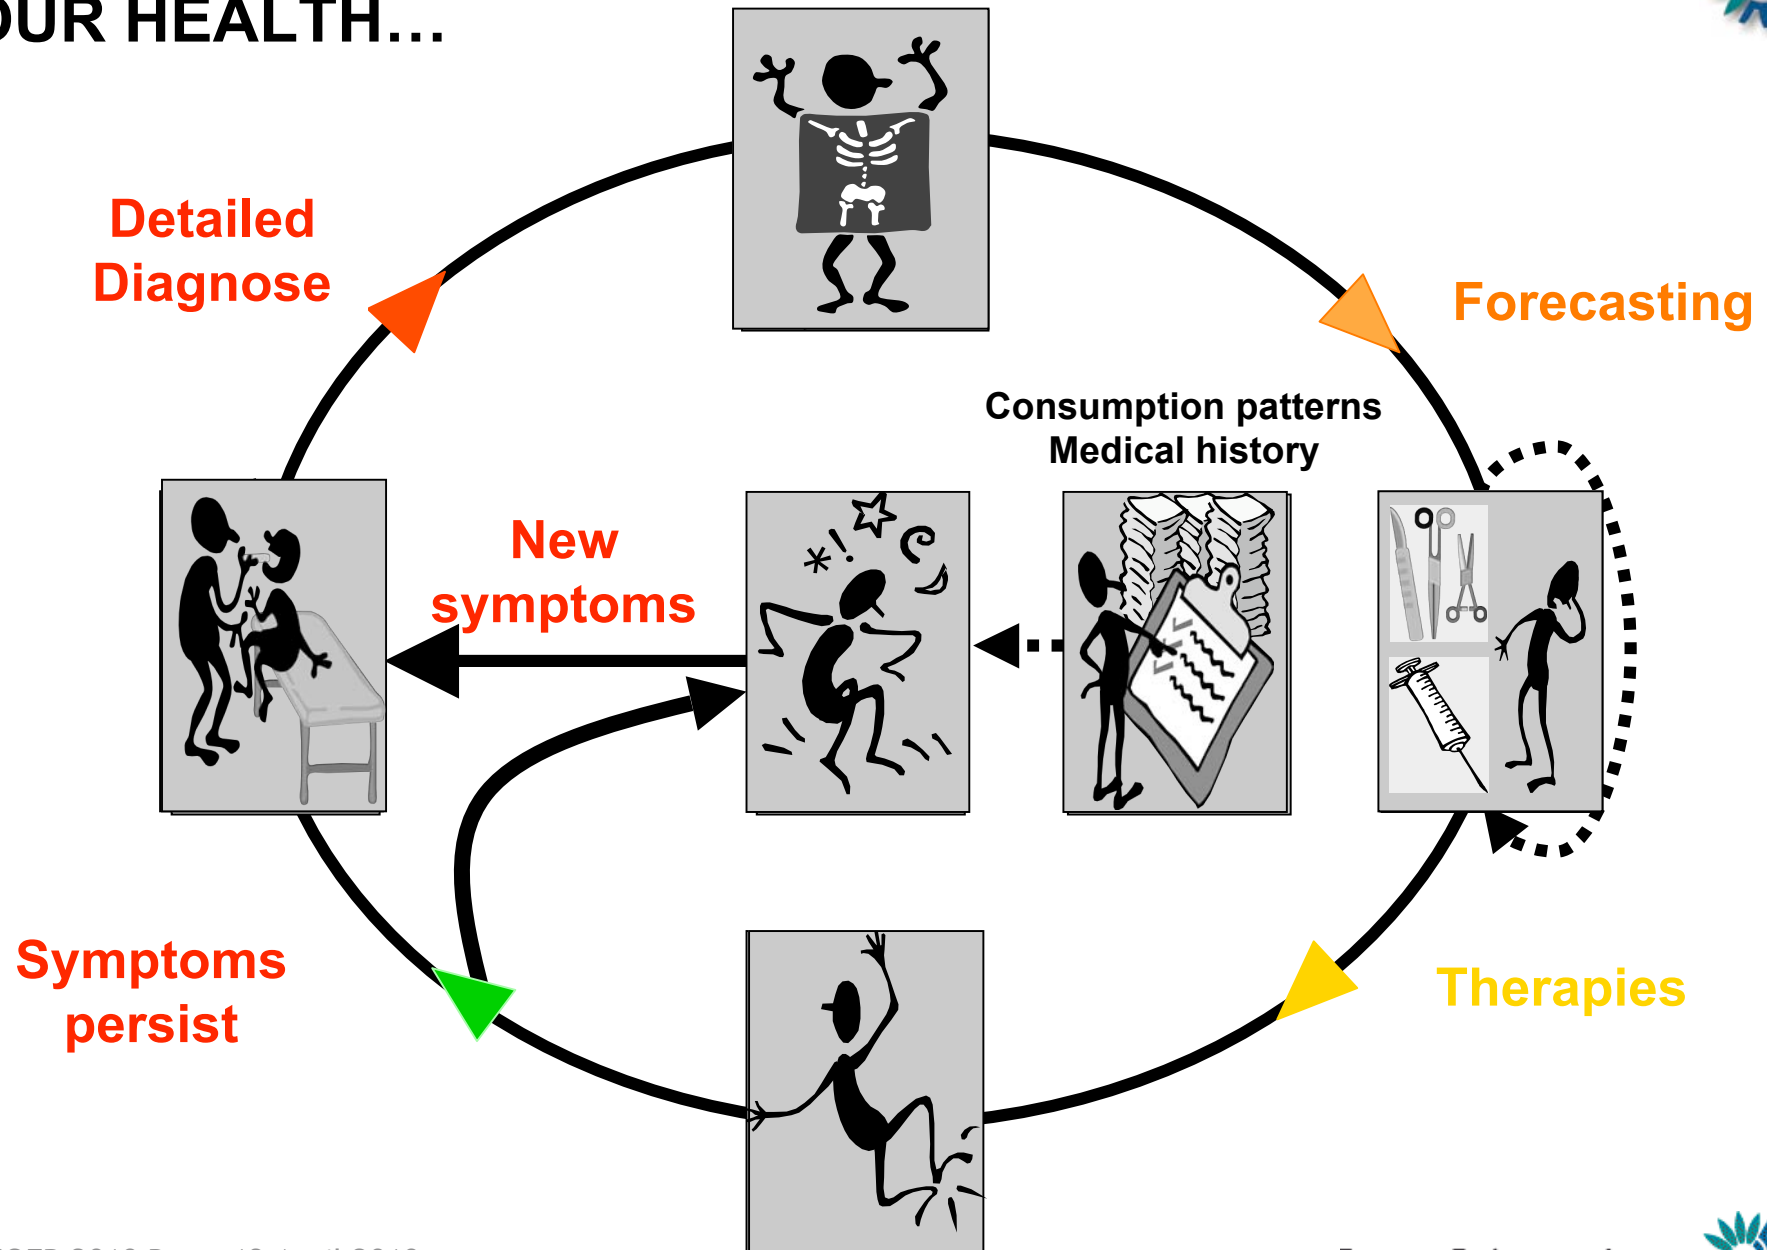

Interface application:

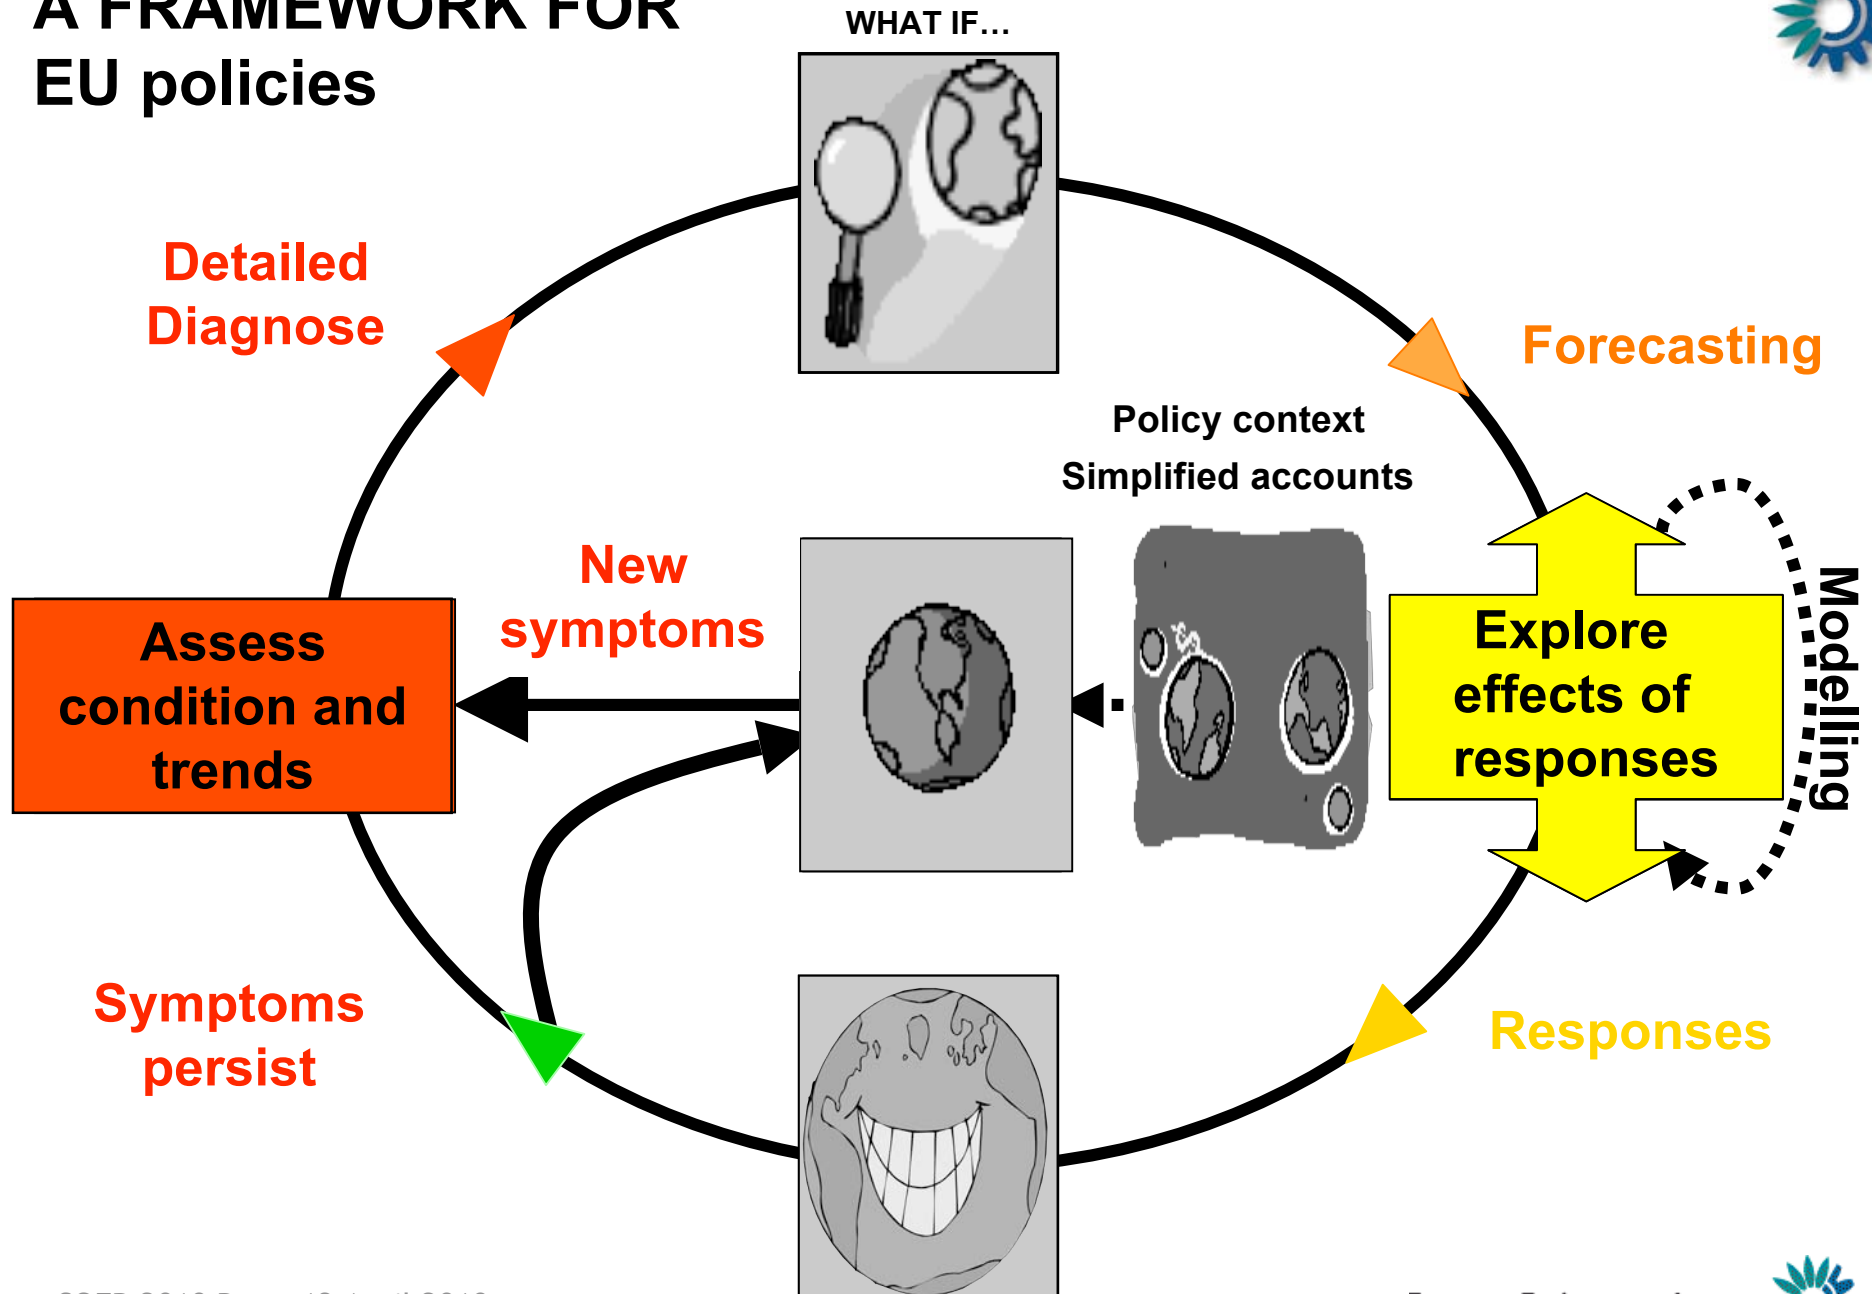

TERRESTRIAL baselines; EURECA; 'What-if' analysis...

SOER 2010 Day - 13 April 2010
and for **MARINE/MARITIME** ???

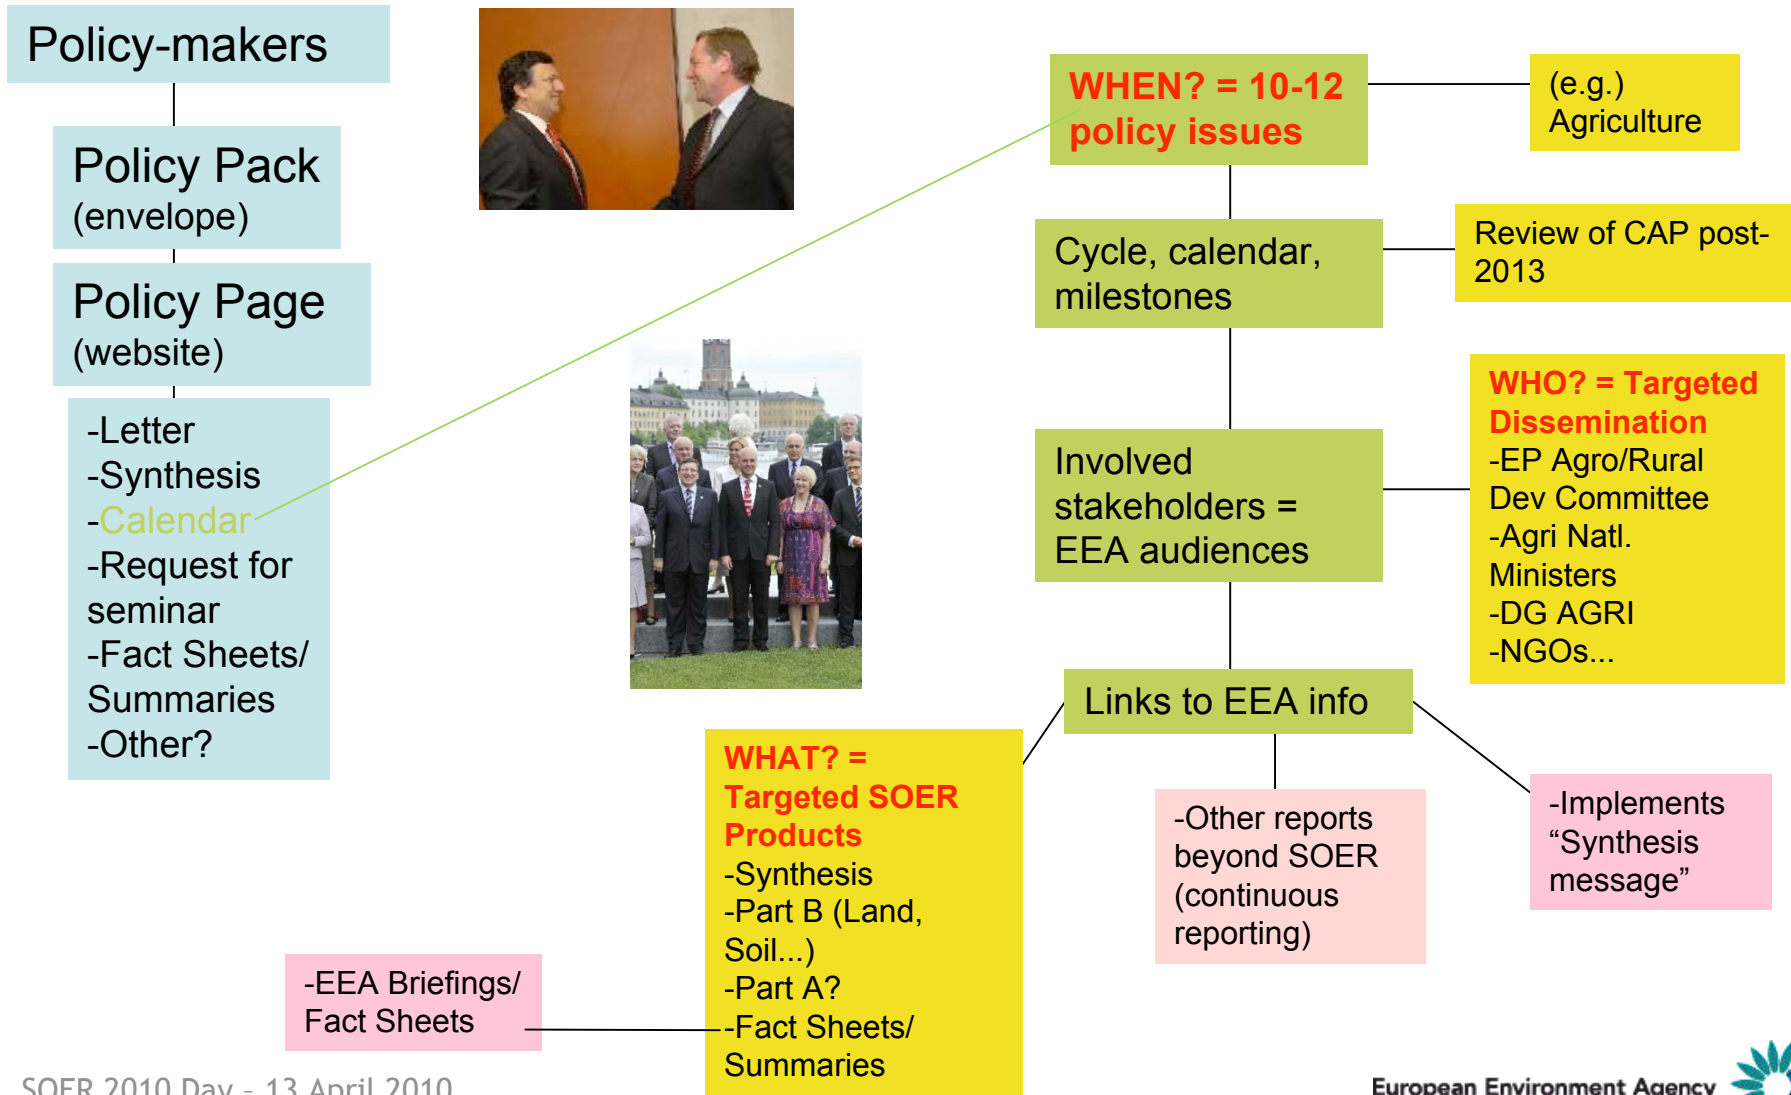

A FRAMEWORK FOR OUR HEALTH...

A FRAMEWORK FOR EU policies

SOER POLICY CALENDAR 2010-2014 plus!

What is the perspective beyond 2010

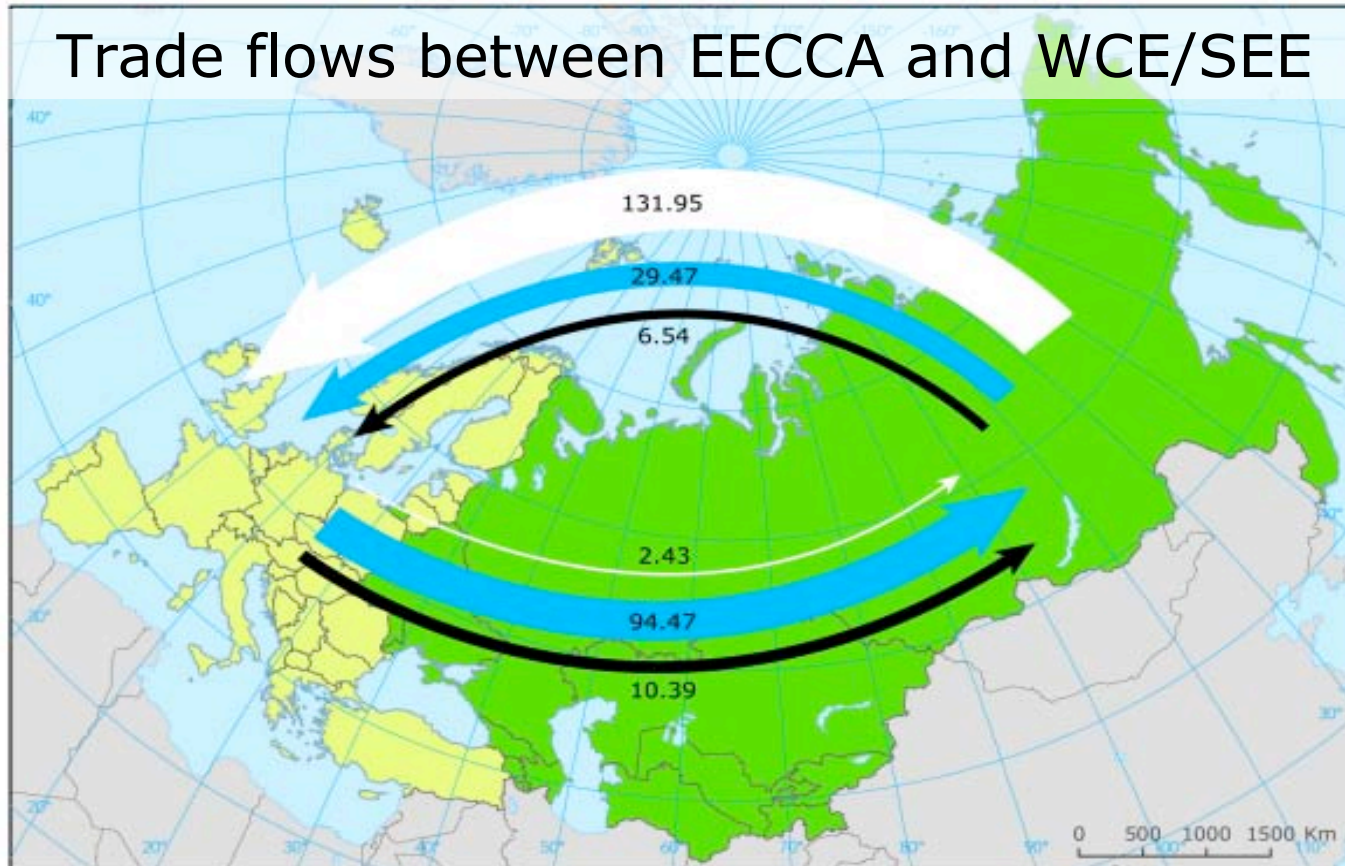

- Continuous move towards the use of the SENSE approach for regular online updating of country environmental performance
- Extend the Commonality topics - Environment and Health, SCP?, Soil?
- A vision to build regular process for updating Part C to feed
 - Pan-European processes (e.g. Astana)
 - GEO-5 process
- Discussions with the DG ENV on synergies between Country updates and the Annual Environment Policy Review process

53 countries and over 870 million people

Sustainable consumption and production

Trade flows between EECCA and WCE/SEE

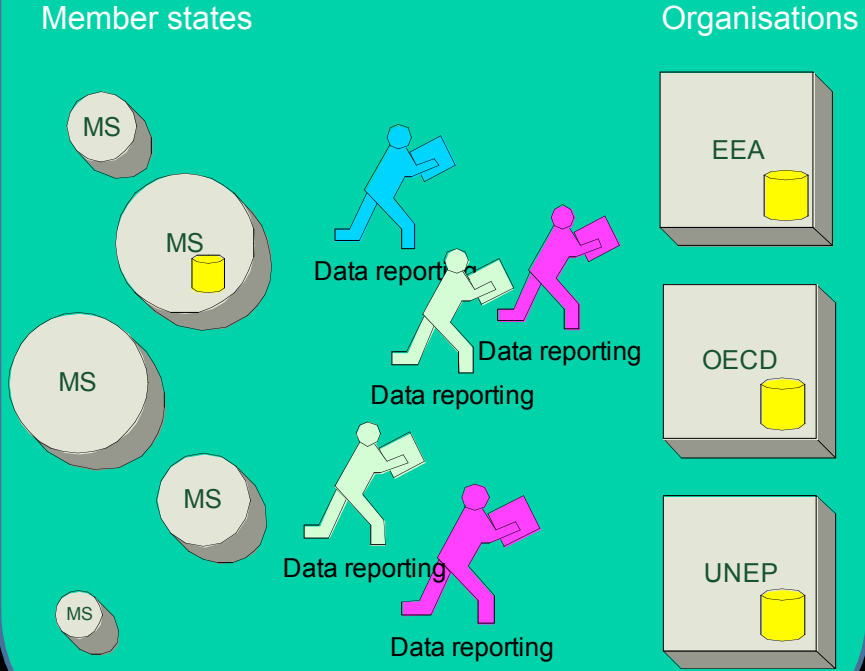

Major categories of trade flows between NWE + SEE and EECCA, 2005 (billion USD)

- Agricultural products
- Manufactures
- Fuels and mining products
- North Western Europe (NWE) & South Eastern Europe (SEE)
- EECCA
- Outside data coverage

Air monitoring

Eye On Earth platform – objective

To provide a user-friendly global platform for dissemination of environmental data and information containing:

- Quality assured data, observed and modelled, voluntary and/or mandatory
- User observations and feedback
- Showcases (Multimedia)
- Visibility to citizen's and community actions

To serve a wide variety of communities and individuals at different levels of complexity
